NFPA 101 LIFE SAFETY CODE STANDARD
Doors protecting corridor openings in other than required enclosures of vertical openings, exits, or hazardous areas are substantial doors, such as those constructed of 1 1/2 inch solid-bonded core wood, or capable of resisting fire for at least 20 minutes. Doors in sprinklered buildings are only required to resist the passage of smoke. There is no impediment to the closing of the doors. Doors are provided with a means suitable for keeping the door closed. Dutch doors meeting 19.3.6.3.6 are permitted.

19.3.6.3

Roller latches are prohibited by CMS regulations in all health care facilities.

This STANDARD is not met as evidenced by:

Based on observation, it was determined the facility failed to maintain 2 of 2 (100 and 200 hall shower room) shower room doors to resist the passage of smoke.

The findings included:

1. Observations of the 100 hall shower room on 2/26/13 at 9:40 AM, revealed the door would not latch,

2. Observations of the 200 hall shower room on 2/25/13 at 10:25 AM, revealed the door would not latch.

Plan of Correction:

1. On 2/27/2013 the 100 and 200 hall shower room doors were adjusted to ensure that they were able to latch when closed.

2. On 2/27/2013 the Maintenance Director inspected the facility’s remaining doors to ensure that the doors properly latched when closed.

3. On 3/15/2013 the Administrator instructed the Maintenance Director regarding the importance of doors completely latching when closed.

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See Instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued

Plan of Correction:

1. On 2/28/2013 State System, Inc. came to inspect our strobe lights for the 100 and 300 halls and determined that a circuit module had to be ordered and will be replaced by 3/28/2013.

2. On 2/28/2013 the Maintenance Director and State System's personnel inspected the remaining strobe lights to ensure compliance.

3. On 3/15/2013 the Administrator reinspected the Maintenance Director to ensure that the strobe lights remain in

protected in accordance with 8.3.6.

This STANDARD is not met as evidenced by:
Based on observation, it was determined the
facility failed to maintain 2 of 4 (100 and 200 hall
fire doors) twenty minute fire doors.

The findings included:

1. Observation above the 100 hall fire doors on
2/26/13 at 1:50 PM, revealed a penetration inside
the 1 inch metal conduit with blue low voltage
cable.

2. Observation above the 200 hall fire doors on
2/26/13 at 2:00 PM, revealed a penetration
through the wall with low voltage blue cable.

These findings were acknowledged by the
Administrator and verified by the Maintenance
Supervisor at the exit conference on 2/26/13.

Requirements:

Penetrations of smoke barriers by ducts
are protected in accordance with 8.3.6.

Plan of Correction:

1. On 2/26/2013 the Maintenance
Director repaired the penetration
found above the 100 and 200 hall fire
doors.

2. On 2/26/2013 the Maintenance
Director Inspected above the remaining
fire doors to ensure that there were on
open penetrations.

3. On 3/15/2013 the Administrator in-
serviced the Maintenance Director to
inspect behind contracted personnel to
ensure that there were no open
penetrations left behind.

4. The Maintenance Director and/or
designee will monitor routinely for
compliance. Findings will be reported
to the QA committee for one quarter.
