2008 Revision

Information on Revised Population Estimates and Projections
Division of Health Statistics – Office of Policy, Planning and Assessment
Tennessee Department of Health
February 1, 2008

The Division of Health Statistics has revised its Population Estimates and Projections series effective February 1, 2008. The 2008 revision updates the Tennessee population data to be compatible with current United States Bureau of the Census information. This 2008 Revision of the 2003 Population Estimates and Projections series will be used for all statistical work prepared by the Office of Policy, Planning and Assessment for data year 2007 and forward until results of the 2010 decennial census are available.

Background

The 2003 Tennessee Population Estimates and Projections series was created with 2000 U.S. Census data as the baseline along with Tennessee estimates for birth and death rates and birth, death, and migration trends forecasted by the U.S. Bureau of the Census at that time. The Division of Health Statistics compared its 2003 Estimates and Projections against more current intercensal estimates for Tennessee and its counties provided by the Bureau of the Census. It was noted that the Bureau of the Census estimate for the state was about 0.6 percent higher than the 2003 Division of Health Statistics estimate for the year 2006. While this difference for the state as a whole was unremarkable, some differences in county populations were more pronounced. Thirteen counties had differences, higher or lower, than five percent and two counties had differences greater than ten percent for the year 2006. The Division of Health Statistics determined it would be appropriate to make adjustments to its 2003 Estimates and Projections series in order to be consistent with estimates being released by the Bureau of the Census.

Differences between the 2003 Series and the 2008 Revision

The difference between the two series for the state total population estimate for 2006 is negligible, less than 34,000 persons or 0.6 percent. In comparing the year 2006 population estimate for the 2003 series to the 2008 revision, six counties showed population increases greater than five percent (Fayette, 13.8 percent; Rutherford, 10.0 percent; Williamson, 9.1 percent; Loudon, 6.0; Wilson, 5.6 percent; Sequatchie, 5.1 percent) and seven counties showed a population decrease of more than five percent (Crockett, -5.2 percent; Jackson, -5.3 percent; Hardeman, -5.7 percent; Pickett, -5.8 percent; Lake, -6.4 percent; Weakley, -6.6 percent; Lauderdale, -6.8 percent).

Methodology for Revision

The method used to revise the estimates and projections involved making a ratio adjustment to the original series to make the data for 2006 coincide with Census Bureau data for 2006. For each age group 0-4, 5-14, 15-44, 45-64, 65-84, and 85+ for each county, the ratio of the Census estimate to the 2003 Health Statistics estimate was determined. The six age group ratios for each county were then applied to the original series data values for 2006 to 2020 according to whichever age group a particular data record was included. Data values for 2000 were not changed. Data values for 2001-2005 were determined by using similar ratio adjustments based upon Census Bureau estimates for those years. The difference between the 2008 Health Statistics revised series and the Census intercensal estimate for the year 2006 for the state as a whole is less than 0.1 percent and no more than 0.5 percent for any county total.
